

PORTFOLIO SNAPSHOT

Enterprise Workflow Applications

Selected enterprise software, workflow automation, reporting, and systems integration case studies.

Enterprise Applications

Workflow Automation

API & System Integration

Business Process Improvement

● Business Need

Operational gap or manual process

● Workflow Design

Roles, stages, rules, approvals

● Enterprise Solution

.NET, SQL Server, APIs, reporting

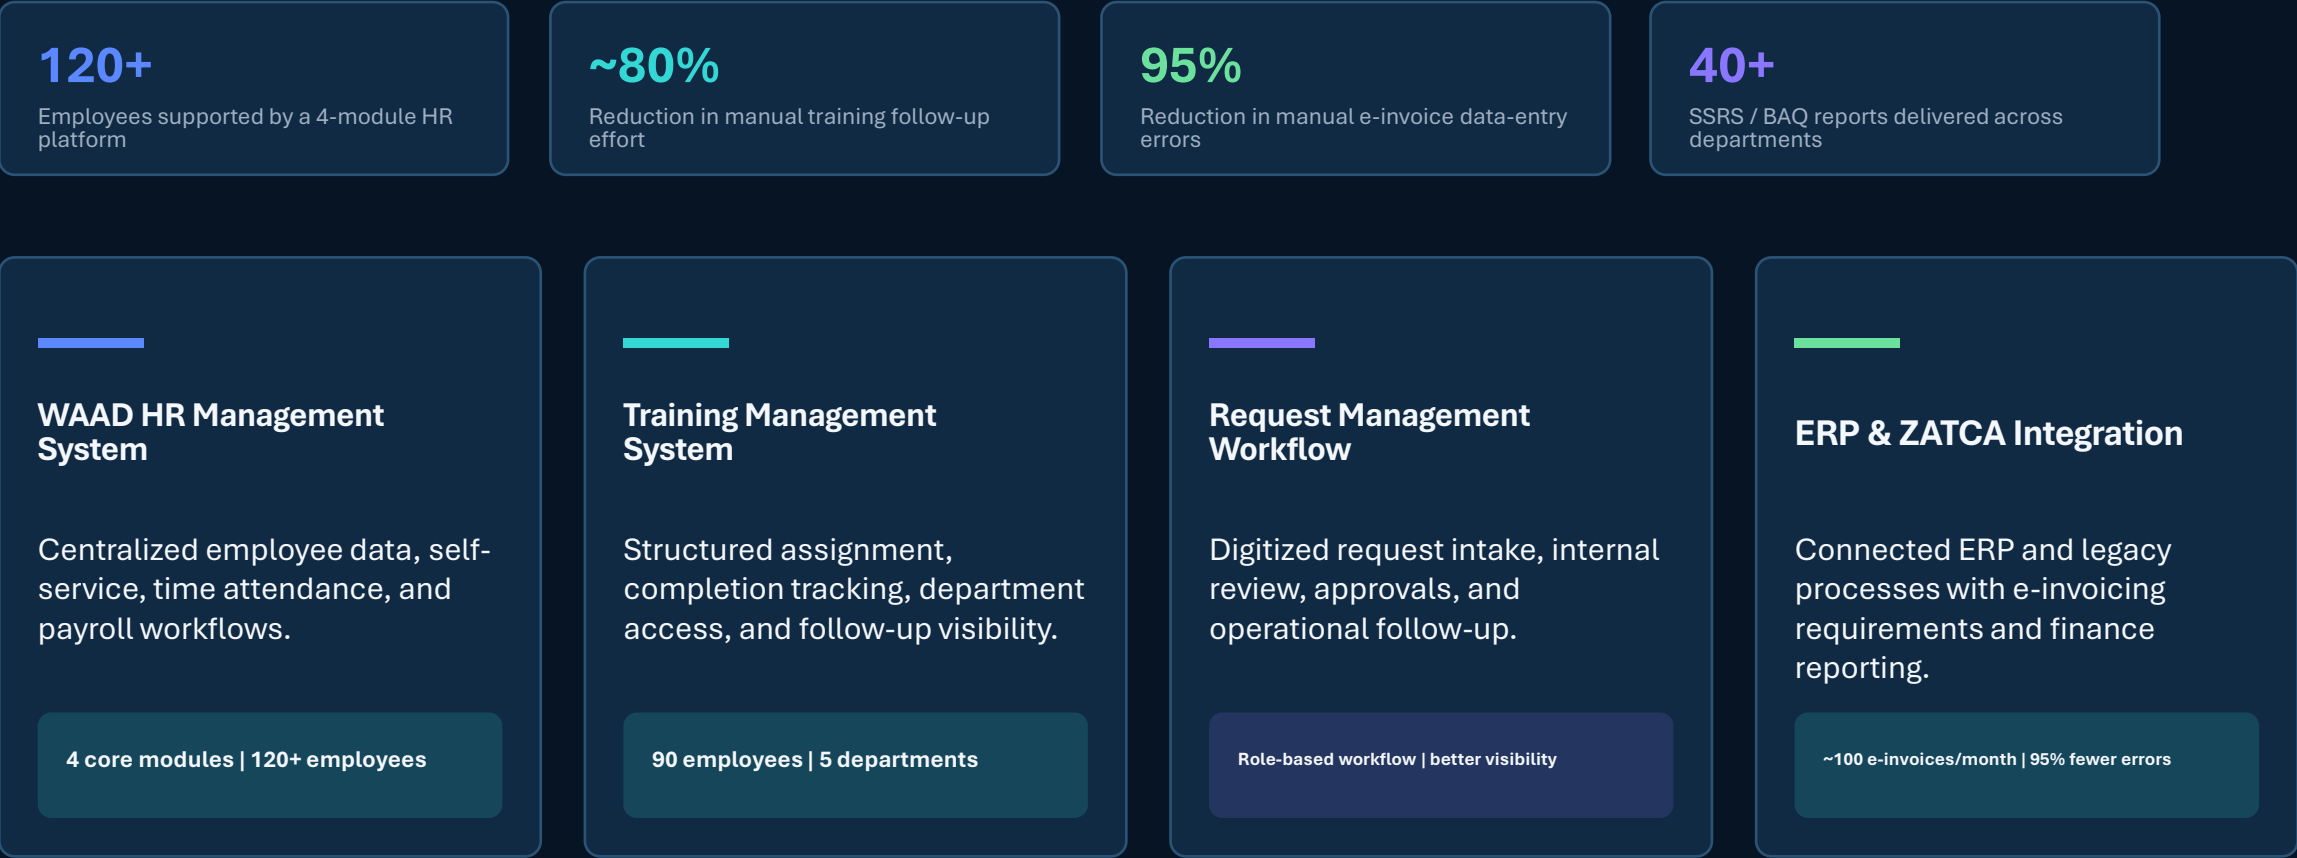

Ahmed Ramadan

Senior Software Engineer | .NET Backend & Enterprise Applications

Sanitized portfolio summary - no client-sensitive data or confidential screenshots included.

Portfolio at a Glance

A business-first view of selected enterprise applications and integration work.

WAAD HR Management System

An enterprise HR platform designed to reduce manual processes and improve employee service workflows.

Business Need

HR operations required a centralized system to manage employee information, service requests, attendance, and payroll with better consistency and visibility.

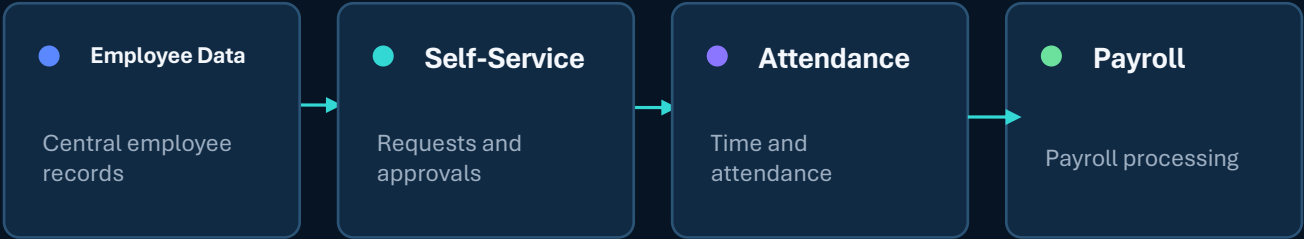

My Role

- Senior Software Engineer, Team Leader, and Product Owner.
- Managed requirements, user stories, acceptance criteria, backlog alignment, and delivery coordination.
- Designed database structures, stored procedures, backend components, and workflow logic.

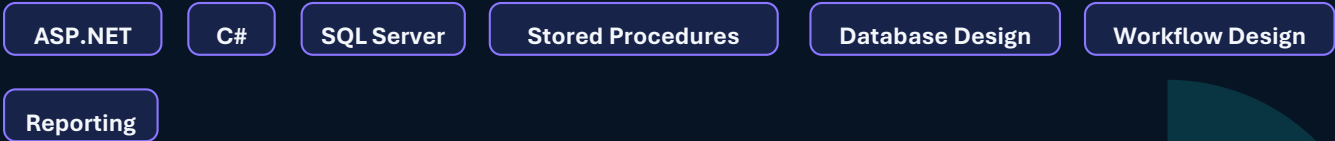

Business Impact

- Supported HR operations for 120+ employees.
- Delivered 4 connected modules covering employee data, self-service, attendance, and payroll.
- Created a scalable foundation for HR workflow automation.

Solution Workflow

Technology & Practices

Outcome Snapshot

A role-based enterprise HR platform that connected core HR processes into one operational workflow and improved service consistency for employees and HR teams.

Workflow Automation in Practice

Two examples of turning fragmented manual follow-up into structured, trackable enterprise workflows.

Training Management System

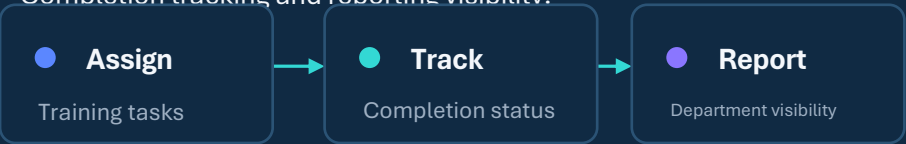

Employee training assignment, tracking, and follow-up

Challenge

Manual training follow-up across departments created delays, limited visibility, and additional administrative effort.

Solution

- Department-based user access and training assignment.
- Completion tracking and reporting visibility.

Impact

90

Employees supported

~80%

Less manual follow-up

Request Management Workflow

Request intake, review, approval, and operational follow-up

Challenge

Scattered request handling made it difficult to track status, responsibilities, review stages, and outstanding actions.

Solution

- Structured request stages and role-based access.
- Internal review and approval workflow.
- Status tracking and reporting support.

Outcome

Improved request visibility, internal coordination, workflow control, and follow-up accountability across the request lifecycle.

ERP, E-Invoicing & Enterprise Reporting

Integration and reporting work that connected business operations with compliance and decision-support requirements.

EPICOR ERP - ZATCA E-Invoicing Integration

Led end-to-end analysis, workflow design, development, testing, finance dashboard support, and deployment coordination.

~100

E-invoices per month

95%

Fewer entry errors

Phase 1 & 2
